# ABOUT US

Arma CS Solutions Pte Ltd is a joint venture between Armacell, CES Advanced and Ananke Solutions for the design and development of customised products that deliver energy-efficient thermal insulation, effective noise control and reduction as well as reliable fire protection and safety performance.

Headquartered in Singapore, Arma CS supports customers in the design, development, prototype creation and fabrication of engineered solutions that reliably delivers best-in-class performance. The company is in an unparalleled position to offer the combined material expertise and proven in-field experience of these three partners, with in-house cutting, lamination, sewing and sealing equipment to engineer bespoke solutions that meet the exacting requirements of customers in the light and heavy industrial applications, energy, marine, defense, infrastructure, HVAC and transportation destination markets.

# BESPOKE SOLUTIONS

Arma CS Solutions takes a customised solutions approach to ensure your project objectives are met. First, we consult with you on-site to assess your needs and constraints and clarify your desired goals. Next, we leverage on our team's extensive experience and material know-how to develop a dedicated solution. Upon approval, we fabricate the prototype to exacting quality standards for testing and certification if required. The tailor-made solution is then manufactured, and installed under supervision. Follow-up on-site assessments are conducted to ensure **your success is achieved.**

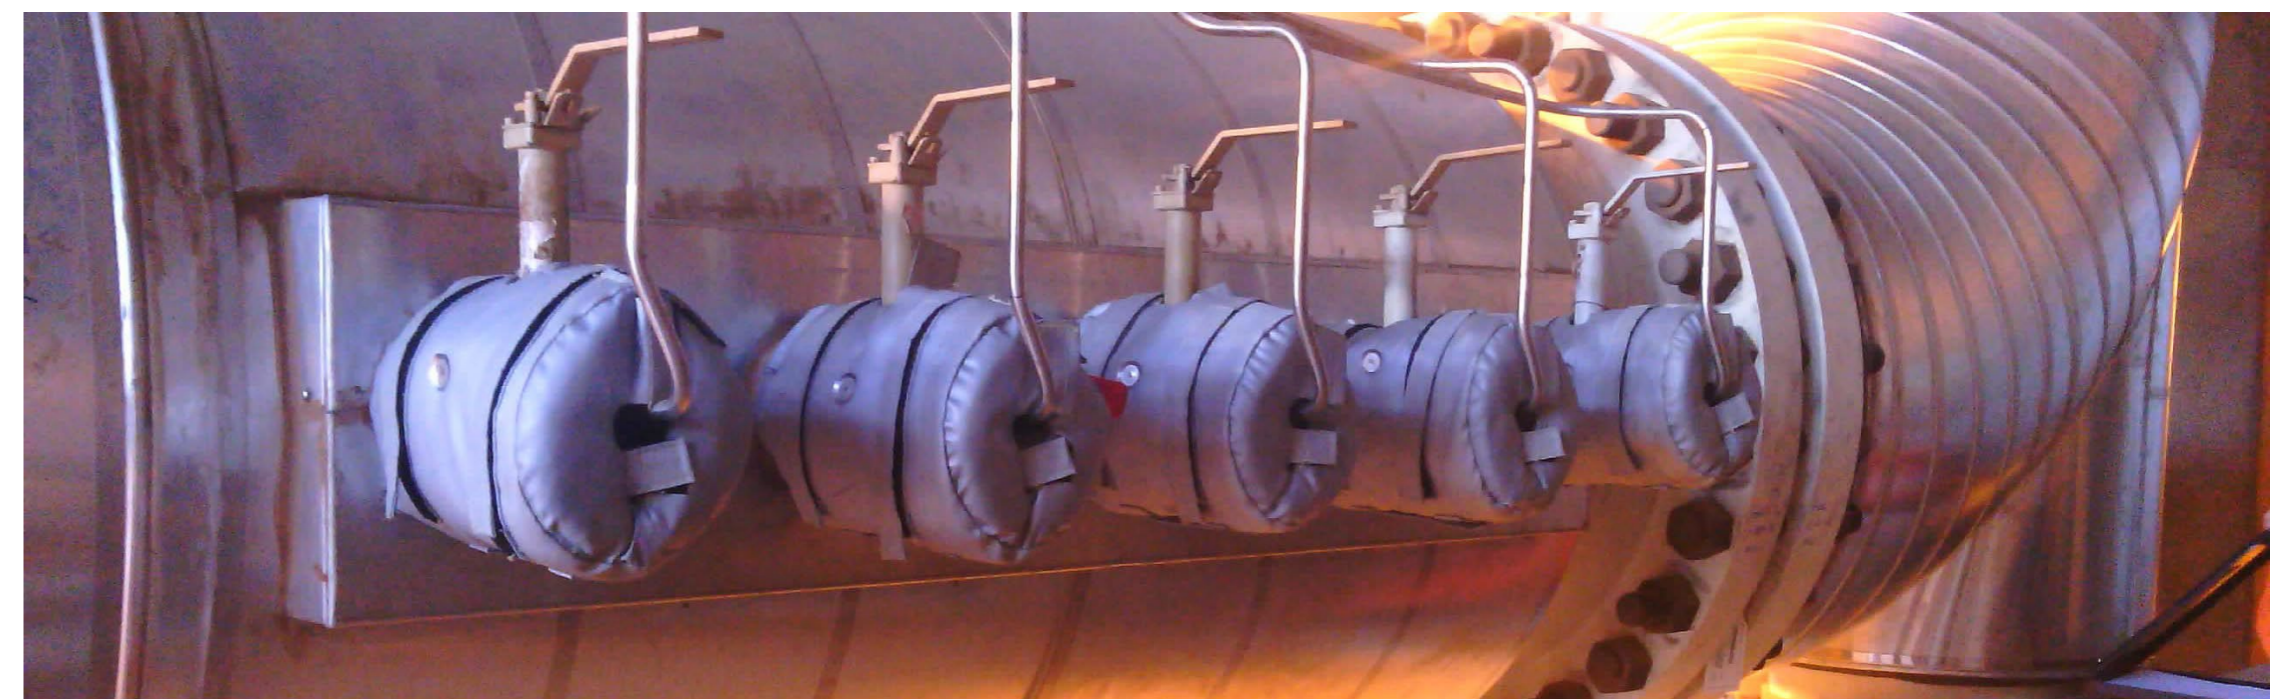

In consultation with you, we will uncover your project needs and develop precisely the right solution.

## “What can Arma CS Solutions do as a full-service partner for me?”

- 1** After understanding your needs, we conduct on-site assessments such as noise modelling and thermal imaging to collect objective data about the situation.
- 2** Your unique solution is developed and prototyped to exacting standards based on our measurements and templates. We partner leading bodies to ensure objective and reliable testing and certification steps are conducted.

- 3** We tailor-make your solution based on in-house capabilities that include templating, precision cutting, sewing and lamination.
- 4** We partner with Armacell to offer on-site and off-site installation training services as well as supervision and after-installation site inspection to ensure that your installation achieves reliable long-term performance as designed.
